

ON SCENE HOSE WINDER

The ROLLY III was designed for coiling layflat fire hoses which are laying on the ground only by pushing the rolling winder over the layed out hose. Hoses up to 75 mm diameter and 20 m length can be coiled single or center folded (dutch stile) very easy: put the hose in the winder and push the winder over the hose - finished ! This takes you approx. 10 seconds without bending, cranking or some other exhausting motions. And because of the sliding grip and his low dimensions, he can find a place on each fire-truck. Now, the new ROLLY III enables the coiling of center folded hoses in a simple and comfortable way: the tension of the hose can be kept during the winding process by a foldable hand crank with an integrated freewheel.

ROLLY III REMOVING AID for center folded (dutch/double stile) coiled hoses The magnetically adhering sleeve on the winding fork ensures effortless shedding of firm and center folded hoses. After the hose is coiled the removing aid can be dropped off with the hose by lateral tilting of the Rolly. The removing aid can be easily taken away from the hose coil and be placed back on the winding bolts.

ROLLY III SUPPORT FOOT for fast and secure parking of the Rolly at the scene, so the Rolly can be used quickly for coiling center folded hoses and is protected from damage. The support foot of galvanized steel is held magnetically to the body of the Rolly and can be easily expanded by foot.
