- **Optional rescue pole available (model 8900299)**

Personal safety is an essential part of any industrial job, especially those involving long periods of work at heights. The 3M™ DBI-SALA® Self-Rescue Device for harnesses provides every crew member the ability to rescue themselves in challenging situations. This nylon rescue pack contains 5.5-millimeter rope, an easily accessible D-ring, and a sealed spool that stands up to corrosion and weather. This rescue device has a universal design that integrates with most harnesses, making it a premium piece of safety gear for construction crews, utility pros, miners, transportation personnel, and oil and gas workers to get themselves out of trouble when suspended.

This self-rescue safety equipment features everything a worker needs to get himself or herself out of a tough spot. After a slip or fall from a height, industrial professionals need to know what to do. This premium detachable safety kit lets them prepare for the worst with a strong lifeline, easily accessible D-ring for secure tethering, and an assisted-rescue ring if workers are injured or semi-conscious. Lightweight emergency harness device is built to be small and streamlined so that it doesn't add excessive weight, cause distractions, or restrict a worker's movement. Tough nylon pack attaches to any full-body harness with its universal design, and it contains durable rope within a streamlined compartment. The personal descent safety product resists abrasions, weather, and wear and tear, providing peace of mind when working up high. Easy-to-use rescue equipment is made with molded padding, providing durable comfort for workers suspended in mid-air. Its lightweight, compact construction makes it easy to carry, store, and wear without a second thought. When another worker has a chance to help out, this essential rope rescue tool can be used with an optional 3M™ DBI-SALA® Rescue Pole.
