

Light respiratory protection for forest and vegetation fires

During forest and vegetation fires, there is an increased health risk due to harmful particles, fine dust and gases via the respiratory tract. The half mask Dräger X-plore® 3500 with combination filter ABEKIHg-P3** offers good protection against particles and gases with easy handling and low breathing resistance. The safety goggles made of robust polycarbonate also protect your eyes. The goggles with a large field of vision can be combined with prescription glasses. The choice of the right respiratory protection device depends on the location, duration and application. **P3 is only achieved with a full face mask

- + Half mask optimized for quick donning and doffing – without the need to remove the head protection
- + Flat design with unrestricted field of vision/perception
- + Optimized design to minimise penetration by embers
- + Good wearing comfort and optimal fit, even in high temperature environments

Dräger X-plore® 1930 V FFP3 NR D, S (10 pcs.)	3951936

Please note: The choice of personal protective equipment depends on the specific conditions of use. The respiratory protection kit offered above is only a recommendation. It is intended to protect users from smoke and gases present during a forest/vegetation fire event. The respiratory kit alone may be insufficient for protection whilst undertaking firefighting activities as only trained personnel should become involved in firefighting activities.
